

Video Comprehension – Computer Parts Explained

<https://www.youtube.com/watch?v=ExxFxD4OSZ0>

Part A: Vocabulary Warm-Up

Match the computer part with its function.

Computer Part	Function
1. Case	a. Holds all the other parts and protects them from damage.
2. Power Supply (PSU)	b. Processes data / runs instructions; sometimes called the brain of the computer.
3. Motherboard	c. Provides long-term storage of programs and files.
4. CPU (Processor)	d. Supplies electrical power to the other components.
5. RAM	e. Memory for temporarily storing information while the computer is running.
6. Hard Drive	f. Connects all parts together, allowing communication between components.
7. Graphics Card	g. Generates graphics, images, video for display.

Part B: While Watching

Fill in the blanks with words you hear in the video.

1. A typical desktop computer has **seven** essential parts, among them the _____ and the **power supply**. [YouTube](#)
 2. The **motherboard** is like a central _____ that connects everything.
 3. The **CPU** runs programs and processes _____ inside the computer.
 4. **RAM** is useful because it allows you to run more _____ at once.
 5. The video contrasts different kinds of **storage** like hard drives and _____.
 6. A **graphics card** handles all of the visual _____ you see on screen.
